

Ideation Phase

Brainstorm & Idea Prioritization

Date	27 June 2026
Team ID	
Project Name	Licensed Software Installation Request Management System using ServiceNow
Maximum Marks	

Brainstorm & Idea Prioritization:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

This template is used to explore, discuss, and prioritize ideas for implementing an automated **Licensed Software Installation Request** process using ServiceNow, ensuring efficiency, compliance, and transparency in software management within an organization

Step-1: Team Gathering, Collaboration & Problem Statement Selection

In this step, all team members gathered and collaborated to identify common problems faced by organizations related to licensed software installation. After brainstorming multiple real-world challenges, the team discussed feasibility, relevance, and impact before selecting the final problem statement.

Identified Problems:

- Employees request licensed software through emails or informal communication.
- Lack of approval workflow leads to unauthorized software installations.
- No centralized tracking of software licenses and installations.
- Delays in software delivery due to manual processes.
- No proper audit trail for compliance and license usage

Selected Problem Statement:

- **“To design and implement an automated Licensed Software Installation Request system using ServiceNow that allows employees to request software through a service catalog, routes approvals to managers and IT teams, ensures license compliance, and provides complete tracking from request to installation.”**

Step-2: Brainstorming Possible Solutions

The team brainstormed multiple ideas to solve the identified problem:

- Create a Service Catalog item for licensed software requests.
- Use dynamic forms to capture software name, version, and justification.
- Implement manager and IT approval workflows.
- Automate task creation for IT support teams.
- Track license availability before approval.
- Send automated email notifications at each stage.
- Maintain audit logs for compliance and reporting.

All ideas were documented without rejection to encourage creativity and collaboration.

Step-3: Idea Evaluation & Prioritization

Each idea was evaluated based on:

- Feasibility
- Business impact
- Ease of implementation
- Alignment with ServiceNow best practices

Idea	Feasibility	Impact	Priority
Service Catalog Request	High	High	High
Approval Workflow	High	High	High
License Tracking	Medium	High	Medium
Automated Notifications	High	Medium	Medium
Compliance Reporting	Medium	Medium	Low

Step-4: Final Idea Selection

After prioritization, the team finalized the solution to implement:

An end-to-end Licensed Software Installation Request system in ServiceNow using Service Catalog, Approval Workflows, Task Automation, and Notifications.

This solution effectively addresses operational inefficiencies, ensures license compliance, and improves user experience.
