

Ideation Phase

Define the Problem Statement

Date	27 June 2026
Team ID	
Project Name	Licensed Software Installation Request Management System using ServiceNow
Maximum Marks	

Customer Problem Statement:

Creating a customer problem statement helps the project team understand the challenges faced by employees and IT administrators during the licensed software installation process. In many organizations, employees struggle to request licensed software due to the absence of a centralized and transparent request mechanism. From the employee's perspective, delays, lack of visibility, and uncertainty in approval status negatively impact productivity and work efficiency.

At the same time, IT administrators face difficulties in managing software requests, approvals, and license compliance due to manual and unstructured processes. The lack of an automated workflow makes it challenging to track software installations, maintain compliance, and ensure proper authorization. By empathizing with both employees and IT administrators, this project focuses on designing a user-friendly, automated, and compliant Licensed Software Installation Request system using ServiceNow that enhances user experience, improves operational efficiency, and reduces compliance risks

Example:

Customer Problem Statement – PS-1 (Employee)

Statement	Description
I am	An employee working in an organization
I'm trying to	Request licensed software required for my job role
But	There is no standard or centralized request process
Because	Software requests are handled through emails or verbal communication
Which makes me feel	Frustrated and uncertain about the request status

Customer Problem Statement – PS-2 (IT Administrator):

Statement	Description
I am	An IT administrator / Software Asset Manager
I'm trying to	Approve, manage, and track licensed software installations
But	Requests and approvals are done manually
Because	There is no automated workflow or license tracking system
Which makes me feel	Overburdened and worried about license compliance
