

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	31 January 3035
Team ID	
Project Name	Licensed Software Installation Request Management System using ServiceNow
Maximum Marks	

Technical Architecture:

The Licensed Software Request Management System is built on the ServiceNow platform using a **multi-layer architecture**.

The system allows employees to request licensed software through the Service Portal, routes approvals to managers, validates license availability, and assigns fulfillment tasks to IT administrators.

The architecture ensures **secure access, automated workflows, real-time notifications, and centralized data management**.

Architecture Flow Explanation

1. Employee submits a licensed software request via Service Portal
2. Request is processed by ServiceNow Workflow Engine
3. Approval is sent to Manager
4. License availability is checked
5. IT Admin installs software
6. Notifications are sent to the employee

Table 1: Technology Stack

Layer	Technology Used
Presentation Layer	ServiceNow Service Portal
Application Layer	ServiceNow Workflow & Flow Designer
Business Logic Layer	Business Rules, Client Scripts
Integration Layer	Email Notifications, Approval Engine
Data Layer	ServiceNow Tables (sc_req_item, task, sys_user)
Security	Role-Based Access Control (RBAC)

Table 2: Component Description

Component	Description
Employee	Submits licensed software request
Manager	Approves or rejects request
IT Administrator	Installs approved software
Service Portal	User interface for request submission
Workflow Engine	Automates approval and fulfillment
Database	Stores request, approval, and license data
Notification Service	Sends email alerts to users

Key Architectural Features

- Centralized request management
- Automated approval workflows
- Secure role-based access
- Scalable and cloud-based platform
- Real-time status tracking
