

Project Design Phase

Proposed Solution

Date	27 june 2026
Team ID	
Project Name	Licensed Software Installation Request Management System using ServiceNow
Maximum Marks	

Proposed Solution :

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employees face delays and uncertainty while requesting licensed software due to manual, unstructured processes such as emails or verbal communication, leading to lack of visibility, tracking, and compliance issues.
2	Idea / Solution Description	Develop an automated Licensed Software Installation Request Management System using ServiceNow that enables employees to request software through a service catalog, routes approvals to managers, validates license availability, and assigns installation tasks to IT administrators.
3	Novelty / Uniqueness	The solution integrates automated approvals, license validation, real-time tracking, and role-based access within a single platform, eliminating manual follow-ups and improving transparency.
4	Social Impact / Customer Satisfaction	The system improves employee experience by reducing frustration and wait times, enhances IT efficiency, and ensures fair and transparent access to licensed software.
5	Business Model (Revenue Model)	The solution leverages the ServiceNow platform to reduce operational costs, prevent duplicate license purchases, and improve software asset utilization, resulting in cost savings for organizations.
6	Scalability of the Solution	The solution is scalable and can support an increasing number of users, departments, and software categories without performance degradation.
