

Project Design Phase

Solution Architecture

Date	27 june 2026
Team ID	
Project Name	Licensed Software Installation Request Management System
Maximum Marks	

Solution Architecture:

Solution architecture defines how the proposed system addresses business problems using appropriate technology components. It bridges the gap between **employee software request challenges** and an **automated, scalable IT service solution**.

The architecture of the Licensed Software Installation Request Management System is designed to automate the end-to-end software request lifecycle, including request submission, approval, license validation, installation, and notification. The solution ensures transparency, security, and efficiency across all stakeholders such as employees, managers, and IT administrators.

Solution Architecture Diagram

Architectural Layers & Description

1. Presentation Layer

- Service Portal interface for employees and managers
- Provides forms for software requests and approval dashboards
- Enables request status tracking

2. Application Layer

- Handles request processing and approval workflows
- Manages business logic using workflows and automation
- Controls approval routing and task assignment

3. Business Logic Layer

- Implements approval rules and license validation
- Enforces role-based access and authorization
- Manages request state transitions

4. Data Layer

- Stores software requests, approval records, and user data
- Maintains license inventory and audit logs
- Ensures data consistency and integrity

5. Integration & Notification Layer

- Sends email notifications for request updates
- Integrates approval and fulfillment processes
- Provides real-time communication to users
